Put Our Experience to Work for You

Automatic Specialties has been in operation for over 30 years. From small, intricate parts for the medical industry to large welded assemblies such as storage racks, Automatic Specialties has both the experience and the technology to get the job done, and get it done right.

Capabilities:

- Wire forming, metal stamping, assemblies
- Material versatility
- Welding
- Painting, plating, and other finishing techniques
- In-house tooling resources for design, production, and maintenance
- Comprehensive inspection methods
- Speedy quotation process

Wire Forming Versatility

With our CNC wire forming machine, we can form wire into virtually any shape you desire and weld it all in the same operation. By utilizing the latest in wire forming technology, we are able to produce your parts with little or no tooling costs.

If you require large quantities, our vast assortment of four-slide machinery enables us to meet those demands, while keeping the piece price at a minimum.

We are able to work with a variety of wire types and diameters including basic and stainless steels, modern superalloys, pre-plated wire and strip, and more.

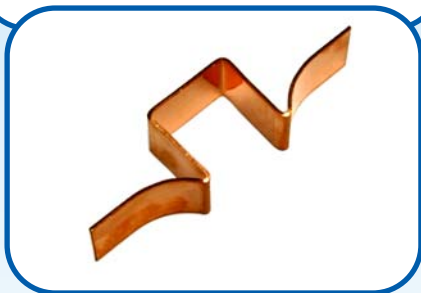

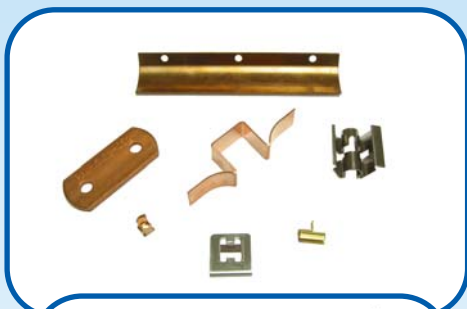

Precision Metal Stamping

Automatic Specialties can manufacture stampings ranging from basic to complex.

If your stamping requires a tool, our in-house engineering department can build, design, and maintain your tools so you always get the high quality results that you, or your customers, demand.

We specialize in medium to higher volume runs and work with a range of material from extra fine to heavy gauges.

Customized Assemblies

From large machinery guards, to small fan guards, Automatic Specialties can build your metal assembly from start to finish.

For more complex assemblies that require forming, coining, hole-punching, notching, or other secondary operations, our extensive line of machinery can help do the job to meet your specifications.

If your assembly requires welding, we have the capability to handle a variety of welds such as butt-welds, T-welds, spot-welds, and MIG and TIG welds.
